

Wandsworth

This profile gives a snapshot of health in your area. With other local information, this Health Profile has been designed to support action by local government and primary care trusts to tackle health inequalities and improve people's health.

Health Profiles are funded by the Department of Health and produced annually by the Association of Public Health Observatories.

To view Health Profiles for other local authorities and to find out how they were produced, visit www.healthprofiles.info

Wandsworth at a glance

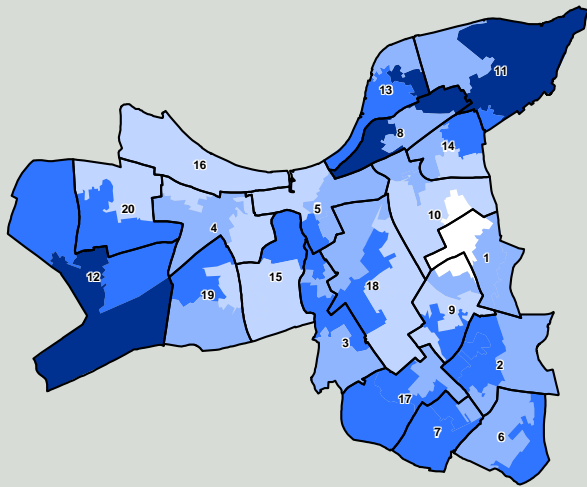

- The health of people in Wandsworth is generally better than the England average. However, hip fractures in over 65s, early deaths from heart disease and stroke, new cases of tuberculosis and deaths from smoking appear worse than the England average; while obesity in adults, physically active adults and smoking in pregnancy appear better than the England average.
- There are inequalities within Wandsworth by location, gender and level of deprivation. For example Queenstown, Roehampton and Latchmere wards appear the most deprived; and men from the most deprived group have five years shorter life expectancy than those in the least deprived group.
- Over the last ten years, overall deaths from all causes and early death rates from heart disease have decreased in Wandsworth but have remained above the averages for England. Early death rates from cancer remain close to the England average.
- The rate of teenage pregnancy remains higher than the regional and national rates.
- Although the estimated proportion of adult smokers is similar to the England average, smoking kills around 320 people every year.
- For further information, please refer to the Public Health Annual Report at www.wandsworthpct.nhs.uk

Deprivation: a national perspective

This map shows differences in deprivation between small areas in this local authority, *compared to the whole of England* (based on IMD 2007).

National deprivation groups

- 1 Least deprived fifth of areas in England
- 2
- 3
- 4
- 5 Most deprived fifth of areas in England

Ward boundaries 2005 are superimposed upon MSA (Middle Super Output Area) boundaries. Each MSA is shaded by Index of Multiple Deprivation (IMD) 2007. For details refer to www.communities.gov.uk. Numbers correspond to ward legend. Ward boundaries may have changed.

Health inequalities: a local perspective

Inequalities in life expectancy (2002-2006) for men and women who live in areas with different levels of deprivation (within this local authority).

95% confidence interval. These indicate the level of uncertainty about each value on the graph. Longer/wider intervals mean more uncertainty. When two intervals do not overlap it is reasonably certain that the two groups are truly different.

Health inequalities: changes over time

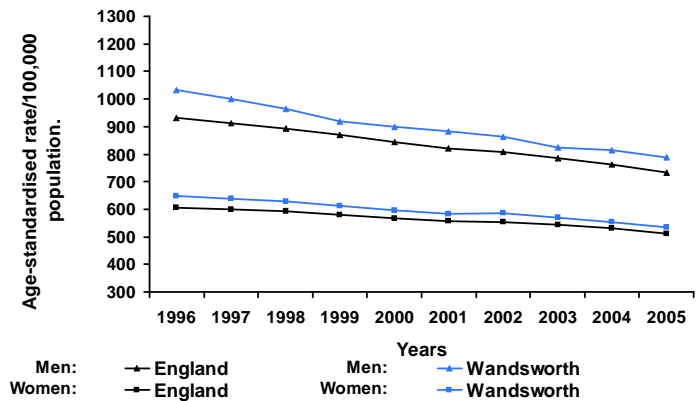

These trend graphs show how changes in health for this local authority compare with changes for the whole of England. Data points are mid-points of 3 year moving averages of annual rates i.e. 1996 represents the 3 year period 1995-97.

Trend 1 compares death rates (at all ages and from all causes) in this local authority with those for England.

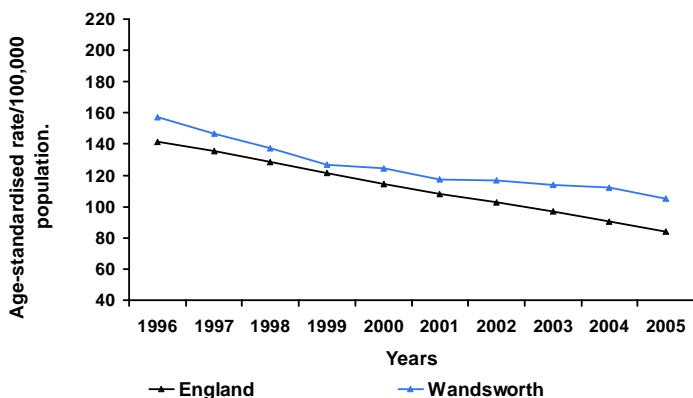

Trend 2 compares rates of early death from heart disease and stroke (in people under 75) in this local authority with those for England.

Trend 3 compares rates of early death from cancer (in people under 75) in this local authority with those for England.

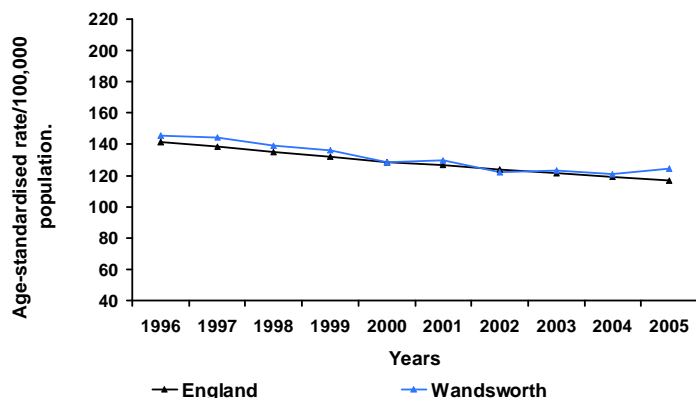

Trend 1: All age, all cause mortality

Trend 2: Early death rates from heart disease and stroke

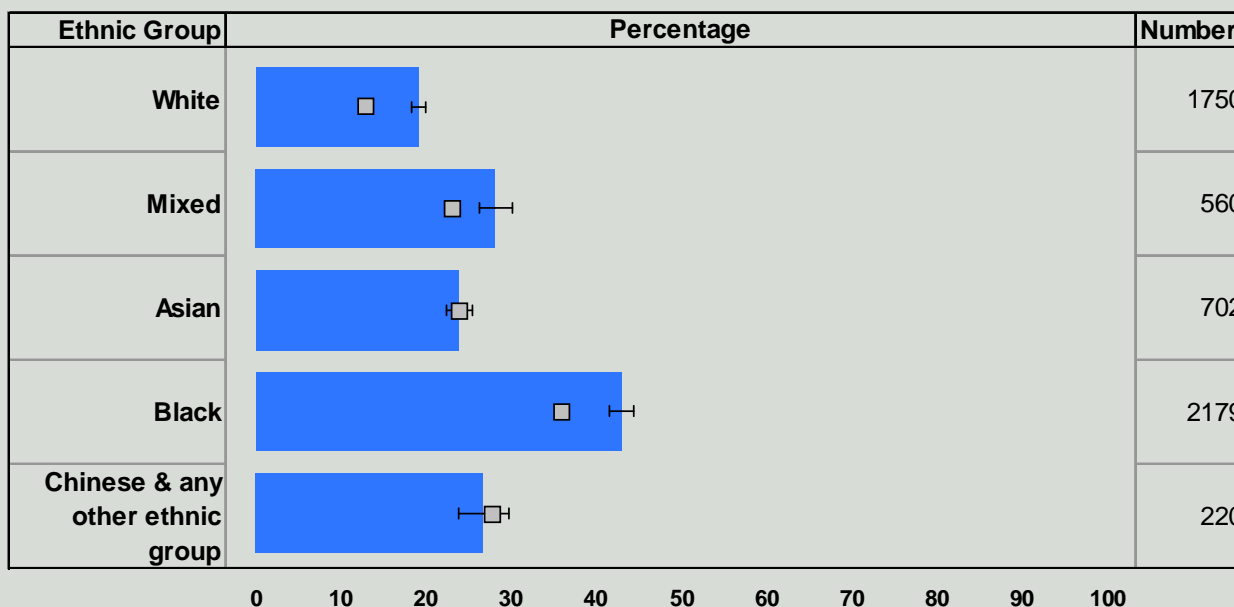

Trend 3: Early death rates from cancer

Health inequalities: ethnicity

This chart compares the percentage of children in each ethnic group who are eligible for free school meals (2007). Eligibility for free school meals is an indicator of deprivation, and people who suffer more deprivation tend to have poorer health. Comparing deprivation by ethnic group helps identify potential health inequalities between groups.

Percentage and number of children eligible for free school meals

Where the total school population in an ethnic group in the local authority is less than 30, no data have been presented and the number column shows n/a. Where the number is less than 5, no percentage is shown.

Legend:
 England - average
 Wandsworth

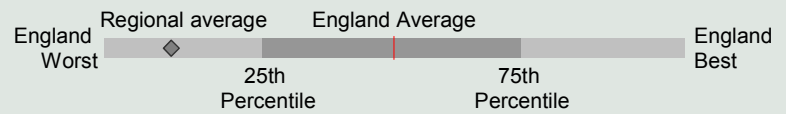

Confidence intervals are shown for local data

Health summary for Wandsworth

The chart below shows how people's health in this local authority compares to the rest of England. The local result for each indicator is shown as a circle, against the range of results for England which is shown as a bar. A green circle may still indicate an important public health problem.

- Significantly worse than England average
- Not significantly different from England average
- Significantly better than England average
- No significance can be calculated

* relates to National Indicator 2007
